DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to a method of treating a patient having graft-versus-host disease comprising administering to the patient an adenosine deaminase inhibitor, classified in class 514, subclass 45.
 - II. Claims 19-33, drawn to a method for preventing or reducing the risk of developing graft-versus-host disease in a recipient of an organ transplant comprising administering an adenosine deaminase inhibitor to the transplant recipient, classified in class 514, subclass 45.
 - III. Claims 34-44, drawn to a method for ex vivo treatment of a tissue or organ transplant comprising treating the tissue or organ transplant with an adenosine deaminase inhibitor, classified in class 514, subclass 45.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions utilize different patient pools resulting in different methodological steps. Group I is drawn to the treatment of patients already having graft-versus-host disease. Group II is drawn a patient population that is free of graft-versus-host disease. Thus, the methods cannot be used together since either the

patient has the condition or he/she does not. Group III differs from both Groups I and II in that Group III is drawn to ex vivo treatment.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. Applicant is not entitled to examination of multiple methods. This indeed would place undue burden upon the examiner in charge of this application.
